Prefire brand kit

How Prefire looks and speaks: the logo, colors, type, ember rays and real product shots. Everything here is also on prefire.ru.

2.0 version Inter + JetBrains Mono #070607 night #FF6A35 ember

01

Your previews are already tests. Everything starts here.

Prefire takes what developers already wrote and turns it into checks, a catalog and images an agent can see. The brand shows that work instead of decorating it.

01

Real output, not illustrations

Every product shot is a real render from prefire render. No mocked screens, no invented numbers.

02

A warm signal on a calm tool

Night carries the surface. Ember and rose appear as rays, glow and one accent per screen.

03

Say what it does

Short, concrete sentences in the developer's words. The result first, then how.

02

The logo. Flame and word.

The flame sits in a rounded square in the mark color. The word is Inter Semibold with tight tracking, set beside the mark at the same height.

Prefire

primary, on night

Prefire

on plum, for covers

Prefire

on paper, for print and light docs

½

½

Prefire

clear space: half the mark height on every side

Prefire

40 px

Prefire

20 px

24 px mark

Minimum	Lockup 20 px tall on screen, 7 mm in print. Mark alone 16 px.
Mark alone	App icons, avatars, favicons, and where the name is already nearby.
Never	Recolor the flame, stretch the mark, add outlines or shadows to the word, or put it on a busy photo.

03

Color. Night first, fire as a signal.

Most of every surface is night. Text sits in three steps of warm grey. Ember and rose are for rays, glow and the one thing to notice.

Night
#070607
Page background

Surface
#0F0D0E
Cards, panels

Text
#F4F1EE
Headlines, body, primary button

Ember
#FF6A35
Rays, links, active states

Rose
#E0336B
Second stop of rays and glow

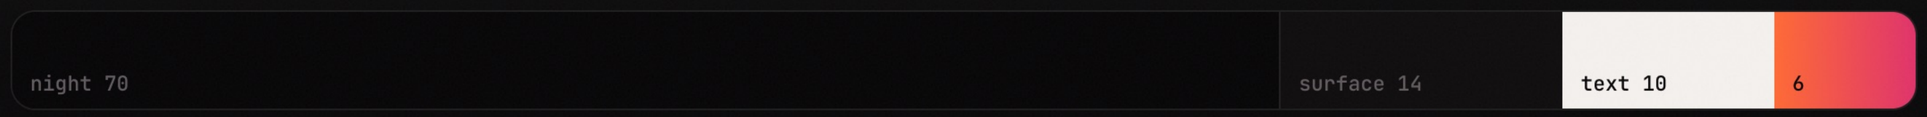

Plum
#31001E
Covers, deep backgrounds

Text 2
#A19A9E
Descriptions

Text 3
#625C60
Labels, captions, comments

Ray
#FF6A35 → #E0336B
The only gradient

Share of a typical screen

04

Type. Inter and JetBrains Mono.

Inter for everything people read. JetBrains Mono for code, commands and file names, never for headings or labels in caps.

Your previews are already tests.

Inter Semibold 84 / 1.02 / -4.5%

Title 52

Let your agent see SwiftUI.

Card 18

Snapshot tests, generated

Body 16

The build plugin writes a test for each preview and compares it with the reference image.

Mono 13

```
prefire render --list
```

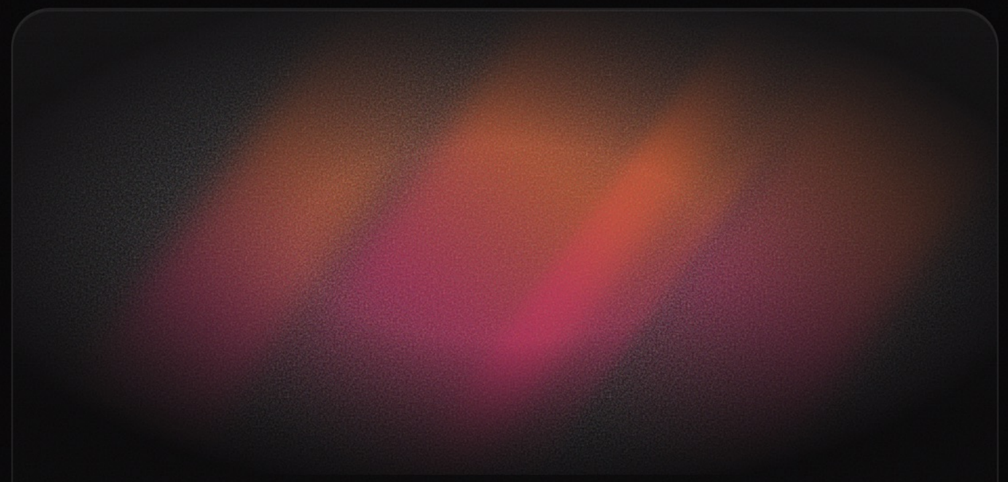

```
#Preview("Trip delayed") {
    TripView(status: .delayed(minutes: 45))
        .previewUserStory(.trip)
        .previewState(.delayed)
}
// keyword, type, function, string, comment
```

Code keeps the syntax colors from the tokens. Show real Prefire API only.

05

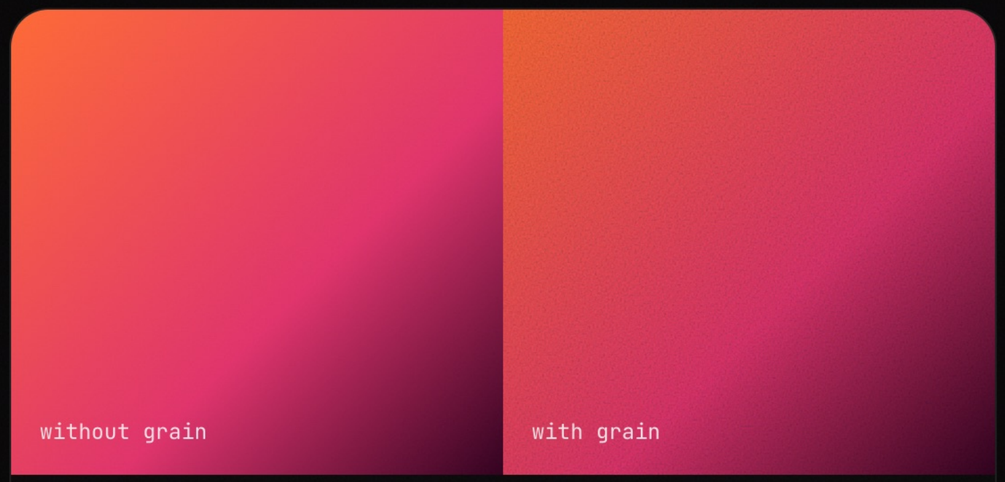

Graphic language. Rays, grain, real screens.

Four pieces build every surface. Use rays once per page, behind the main message, and let product shots do the rest.

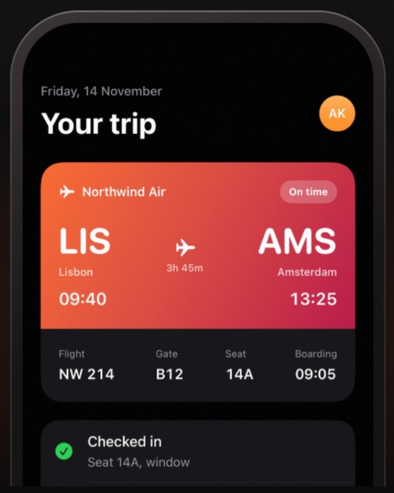

Ember rays

Parallel bands at 36°, ember to rose, softly blurred and faded out at the edges. Behind heroes and closing calls only.

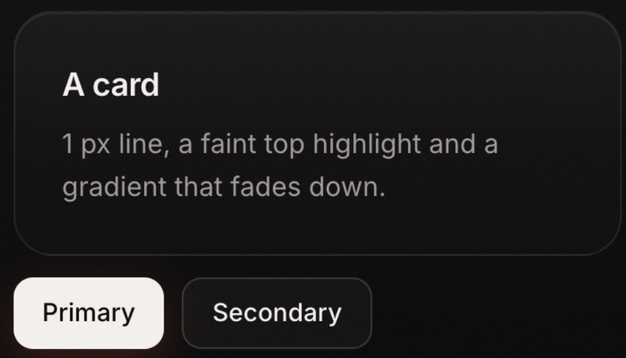

Grain

Fine noise over rays and gradients, and very faintly over the whole page. It keeps the fire from looking like a flat CSS fill.

Product shots

Real `prefire render` output in a dark phone frame with a warm glow underneath. Light and dark renders of the same screen sit side by side.

Surfaces and buttons

Radius 22 for cards, 11 for buttons, 50 for phone frames. One light button per screen.

06

Voice. An engineer who saves you time.

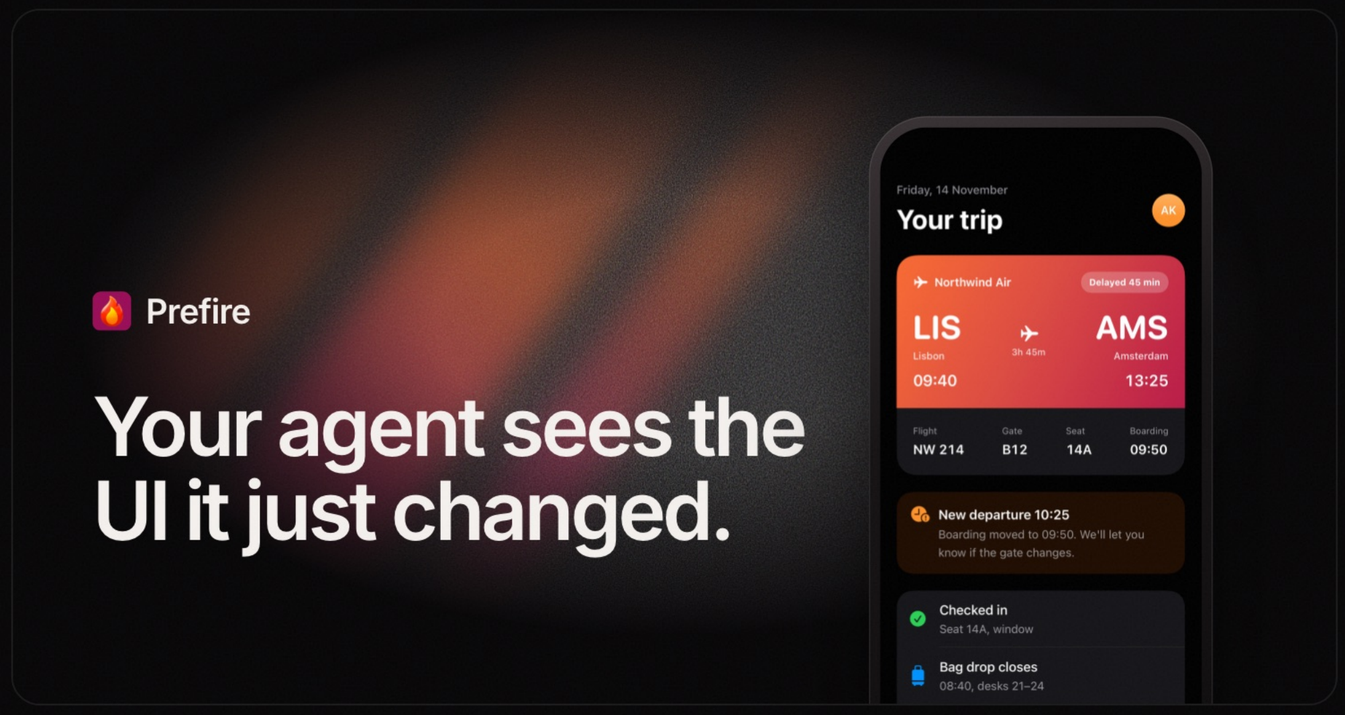

Calm and specific. Swift terms stay Swift terms. Promise what the tool does today, with its limits.

Not this	This
~~Revolutionary AI-powered testing~~	Snapshot tests from the previews you already wrote
~~Zero effort, works everywhere~~	Snapshot tests on iOS, tvOS and macOS. Playbook on iOS.
~~Give your AI superpowers~~	Your agent sees the UI it just changed
~~Seamlessly elevate your workflow~~	One command to connect: claude mcp add prefire -- prefire mcp

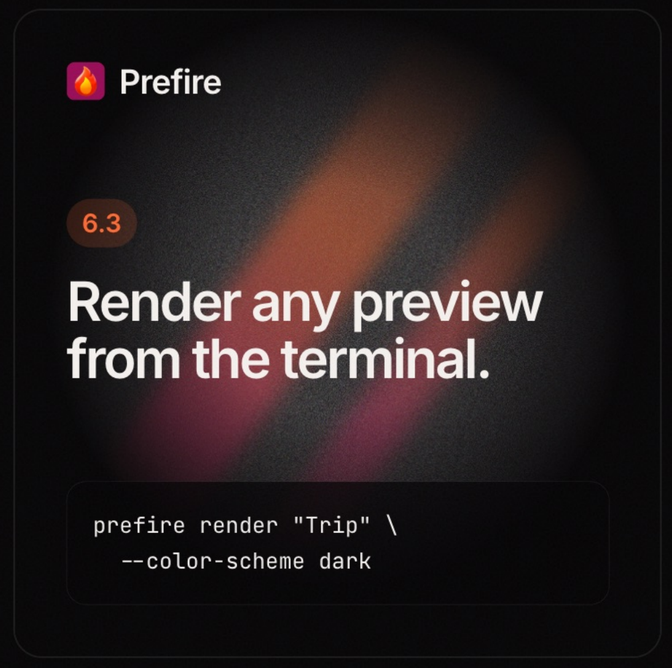

07

Templates. One idea per surface.

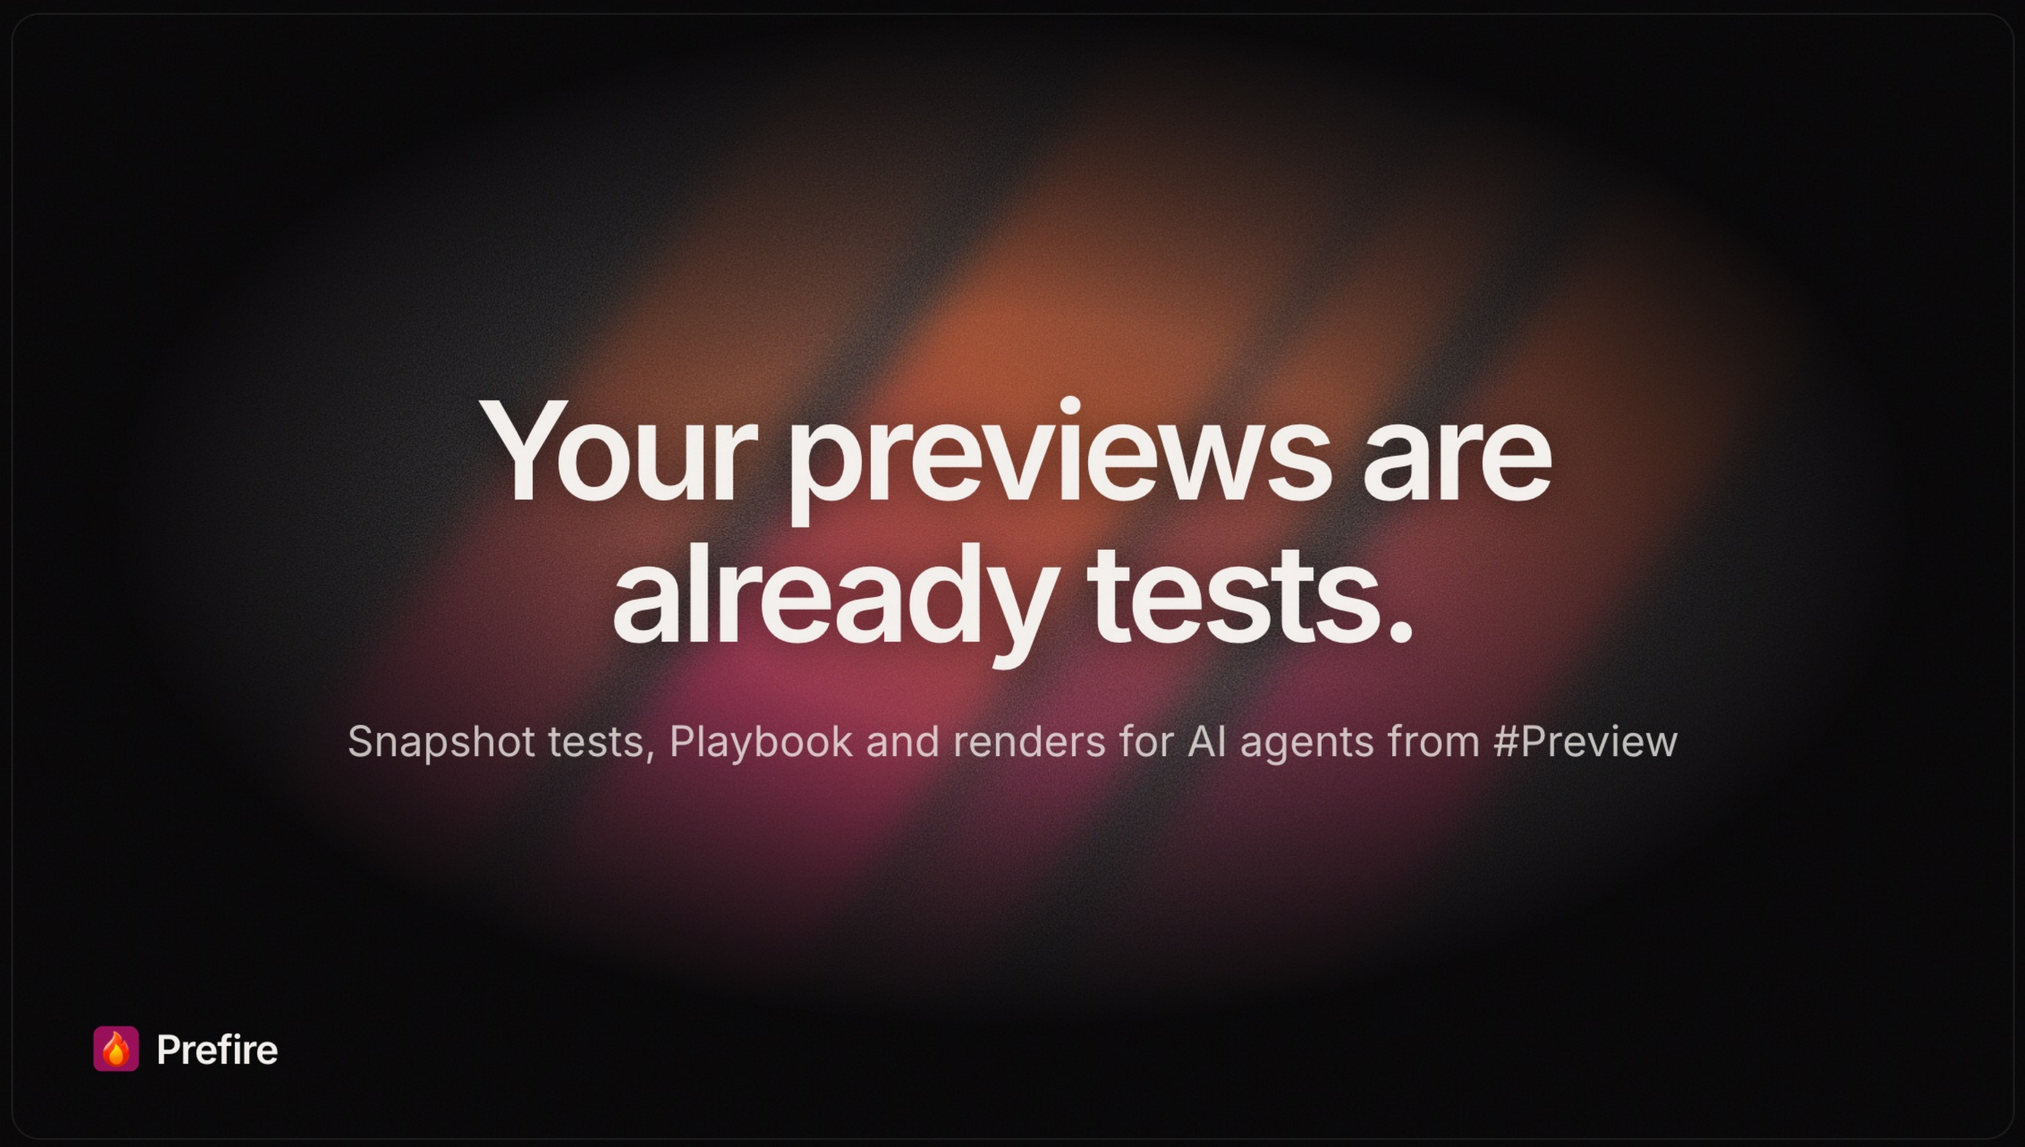

Social posts, release notes and talks use the same pieces: a short headline, a real render or real code, and rays.

Social card, 1200 × 630

Release post, 1080 × 1080

Talk title slide, 16 : 9
